

Enterprise IoT Monitoring for Modern Growers

Whisker.io is a comprehensive, enterprise grade IoT monitoring solution designed to provide real-time oversight and feedback of your facilities, equipment and processes. Our wireless sensors have exceptional range, long battery life, and can monitor just about anything you can imagine. The alerting system provides notification within minutes of any problem and is intelligent enough to prevent false alarms.

Features and Benefits

- Amazing Air Quality Monitoring
- Temperature, Humidity, Dew Point, VPD, CO2
- HVAC Compressor Monitoring
- Current, Energy, Inlet/Outlet Temperature
- Intelligent alerts provide instant notification
- Unbelievable range, 10+ years battery life
- Easy to install and use
- 24/7 Monitoring - Instant Alerting
- Maximize profits, reduce inventory loss

Real-Time Data

Whisker.io® is an enterprise grade IoT platform that uses advanced wireless sensors to provide real-time remote monitoring of environmental conditions and equipment health, including parameters such as temperature, humidity, water chemistry, light levels, HVAC units, and more. Our wireless sensors take readings every 5 minutes and when a problem is detected, our intelligent alerting system will send you notifications by email or text. The sensors are capable of long range(>1 mile LOS) and exceptional battery life (10+years) and can be installed in minutes by anyone, regardless of their technical training. Sensor data can be viewed using our easy-to-use visualization and analytics tools, which can be accessed on any computer or mobile device with a modern web-browser.
